Abstract:

Increasing nursing research competence instruments have been developed. However, a systematic review and evaluation of nursing research competence instruments is lacking. This scoping review was conducted by updated methodology for scoping reviews and reported according to the Preferred Reporting Items for Systematic Reviews and Meta-Analyses extension for Scoping Reviews checklist. Reviewers searched articles in eight the literature screening and data extraction were conducted by two reviewers, independently. A third reviewer was involved when consensus was needed. The Consensus-based Standards for the selection of health Measurement Instruments methodology was used to evaluate the methodological quality and measurement properties of the nursing research competence instruments. Ten studies involving eight nursing research competence instruments were included. None of the existing instruments have assessed all measurement properties.
